

Greetings parents and guardians~

Your student has been referred for school-based therapy through our program. All services are conducted by qualified mental health professionals and practitioners.

Let me tell you a little about what to expect:

Course of Treatment:

- **Intake:** Your provider will call you to schedule an intake session. Both you and your child will attend this session. During this meeting, your provider will ask you many questions to help determine how we can best help. This session lasts approximately 90-120 minutes.
- **Therapy:** We provide a stabilization model of therapy focused on treatment plan goals. We average approximately 15 sessions per episode of care. As needed, your provider will work with you to determine appropriate options for longer term services/supports based on your insurance coverage and clinical needs.
- With a signed release of information, the provider will communicate with school counselors, social workers and teachers for collaboration of care.
- Family involvement is a critical component of our services. As your student moves through therapy, family sessions are encouraged to best support lasting change.

Delivery of services:

- We can provide individual and family therapy at the school, at your home (*based on need and provider availability*), and/or via telehealth as needed.

Financial considerations:

- Services will be billed through any available health insurance and families will receive a bill for their co-pay and deductible.
- Grant support is available via a sliding fee scale program based on need. Contact us at 612-455-8643 with further questions.

Please consult our website at www.acp-mn.com for further information about ACP programming. We look forward to working with you.

Sincerely,

Kelly Johnson, LMFT

Director of Community and School Based Services
